EXIT – DOFFING

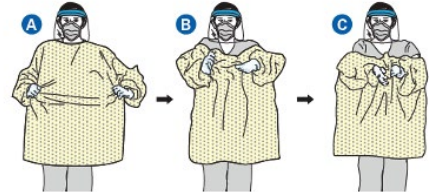

All operations are carried out in pairs with a colleague.

- 1) Wash external gloves by immersion (1st bucket hypochlorite solution 0.5%)
- 2) Spray decontamination solution under the overboots

- 3) Remove the outer pair of gloves (with "pinch and slide" technique as shown in the figure)
→ into the infectious waste container

- 4) Helped by a colleague, remove the green gown and the surgical bonnet (manipulating from the backside and/or inside)
→ into the infectious waste container

- 5) Sitting on a bench, leave "dirty" shoes in the dirty area. Gliding on the bench beyond the dirty/clean line, wear "clean" shoes.

- 6) Wash inner gloves by immersion (2nd bucket hypochlorite 0.5%) and dry with a towel

- 7) Take off safety goggles manipulating them only from the back elastic band
→ into the decontamination container, to be reused

- 8) Remove the FFP3/FFP2 mask, starting from the lower elastic, without touching the filtering part, checking that it does not come into contact with clean clothes under the chin

- 9) Remove the inner pair of gloves
→ into the second infectious waste container

- 10) Perform hand hygiene
